Backend Software Engineer · Java · Spring Boot · PostgreSQL · AWS

SUMMARY

Backend Software Engineer with nearly 4 years of fintech experience building high-throughput distributed systems in Java, Spring Boot, PostgreSQL, and AWS. Shipped mission-critical platforms - loan disbursement (₹50 Cr+/month), CKYC automation (300K+ cases/hour), collateral management - with full-SDLC ownership: system design, DB optimization, automation, and production support. Regular use of AI-assisted, agentic development tools (Claude Code, Antigravity) to accelerate delivery of production features.

EXPERIENCE

Protium Finance

Nov 2022 – Aug 2026

Software Engineer

Bengaluru, India

- Built high-throughput CKYC compliance automation system using Spring Batch, AWS SQS, and S3, **processing 300K+ cases/hour** and generating revenue within the first year.
- Developed an enterprise loan disbursement platform handling **₹50 Cr+/month**, scaling operational **throughput 10x** through end-to-end automation of loan lifecycle workflows using Java, Spring Boot, PostgreSQL, and AWS.
- Led a collateral valuation platform supporting 450+ vendors, reducing turnaround time **from 7 days to 1–2 days** via a dual-portal architecture and automated workflow orchestration.
- Designed event-driven communication pipelines using AWS SQS/SNS and PostgreSQL, replacing manual WhatsApp/email coordination across 150+ branches and 450+ vendors.
- Delivered a WhatsApp customer-communication integration (Fyno platform) using Claude Code with a structured, spec-driven multi-file workflow, completing in 1 week a feature estimated at 4 weeks.
- Built a Playwright-based Java QA automation framework with Page Object Model, 7-browser parallel execution, API-driven waits, and CI/CD + Allure integration, **reducing QA cycle time by 85%**.
- Refactored legacy modules into scalable, modular microservices with improved code quality, cleaner abstractions, and enhanced deployment agility.
- Implemented observability with Kibana, OpenSearch, and structured logging; owned production systems during peak loads and resolved critical incidents (on-call).

Protium Finance

Jun 2022 – Aug 2022

Software Engineer Intern

Bengaluru, India

- Engineered a company-wide document generation engine using Spring Boot and Thymeleaf with asynchronous processing and S3 storage, powering **1M+ PDFs** generated over 3+ years in production.
- Built 50+ production document templates with versioning support and a “one-click” automation API, cutting document preparation time from **5–7 days to ~10 seconds**.

PROJECTS

Kintsugi — Transaction Recovery Engine (Java, Spring Boot, Temporal, Docker)

[GitHub](#)

- Architected a subscription payment recovery system addressing involuntary churn in fintech, using Temporal durable workflows for fault-tolerant, failure-aware retry orchestration at scale.
- Implemented HMAC-signed webhook ingestion, idempotent workflow execution, and failure-classified retry strategies with real-time monitoring metrics; containerized with Docker Compose, tested with JUnit 5 and Mockito.

TECHNICAL SKILLS

Languages: Java, SQL, HTML, XML

Frameworks & Libraries: Spring Boot, Spring Batch, Spring Security, Hibernate, JPA, JOOQ, Lombok, Thymeleaf, JUnit 5, Mockito

Databases: PostgreSQL, MySQL, Firebase

Cloud & DevOps: AWS (S3, SQS, SNS, EC2, Lambda), Docker, CI/CD, GitHub Actions

Architecture: Microservices, REST APIs, Distributed Systems, Message Queues, Batch Processing, Temporal

AI-Assisted Engineering: Claude, Claude Code (agentic, spec-driven development workflows), Google Antigravity IDE

Tools: Postman, Swagger, JIRA, Maven, Gradle, Playwright, Git, Kibana, OpenSearch

EDUCATION

Integral University, Lucknow

Jun 2018 – Jun 2022

B.Tech in Computer Science

Lucknow, India
